EVERYTHING
YOU NEED TO KNOW ABOUT
CHEEK FILLERS

What are **Cheek Fillers**?

Injectable dermal fillers have been used in cosmetic medicine for many years, implemented to gently restore structure and volume to the face, creating more harmonious and balanced features.

The dermal fillers we use imitate substances that bind hydration and are naturally found in your skin. This process encourages the production of collagen, while immediately adding volume to the area.

It may be that your cheeks have lost their natural definition over time, or that you've always wanted fuller cheeks. Dermal fillers can be used to enhance cheekbones and to restore cheeks that have sunken with age.

This procedure is a minimally invasive injectable cosmetic treatment, with immediate results.

Top up treatments are required every 5-9 months, and up to 18 months, dependent on the area treated, the product used and the individual's metabolism.

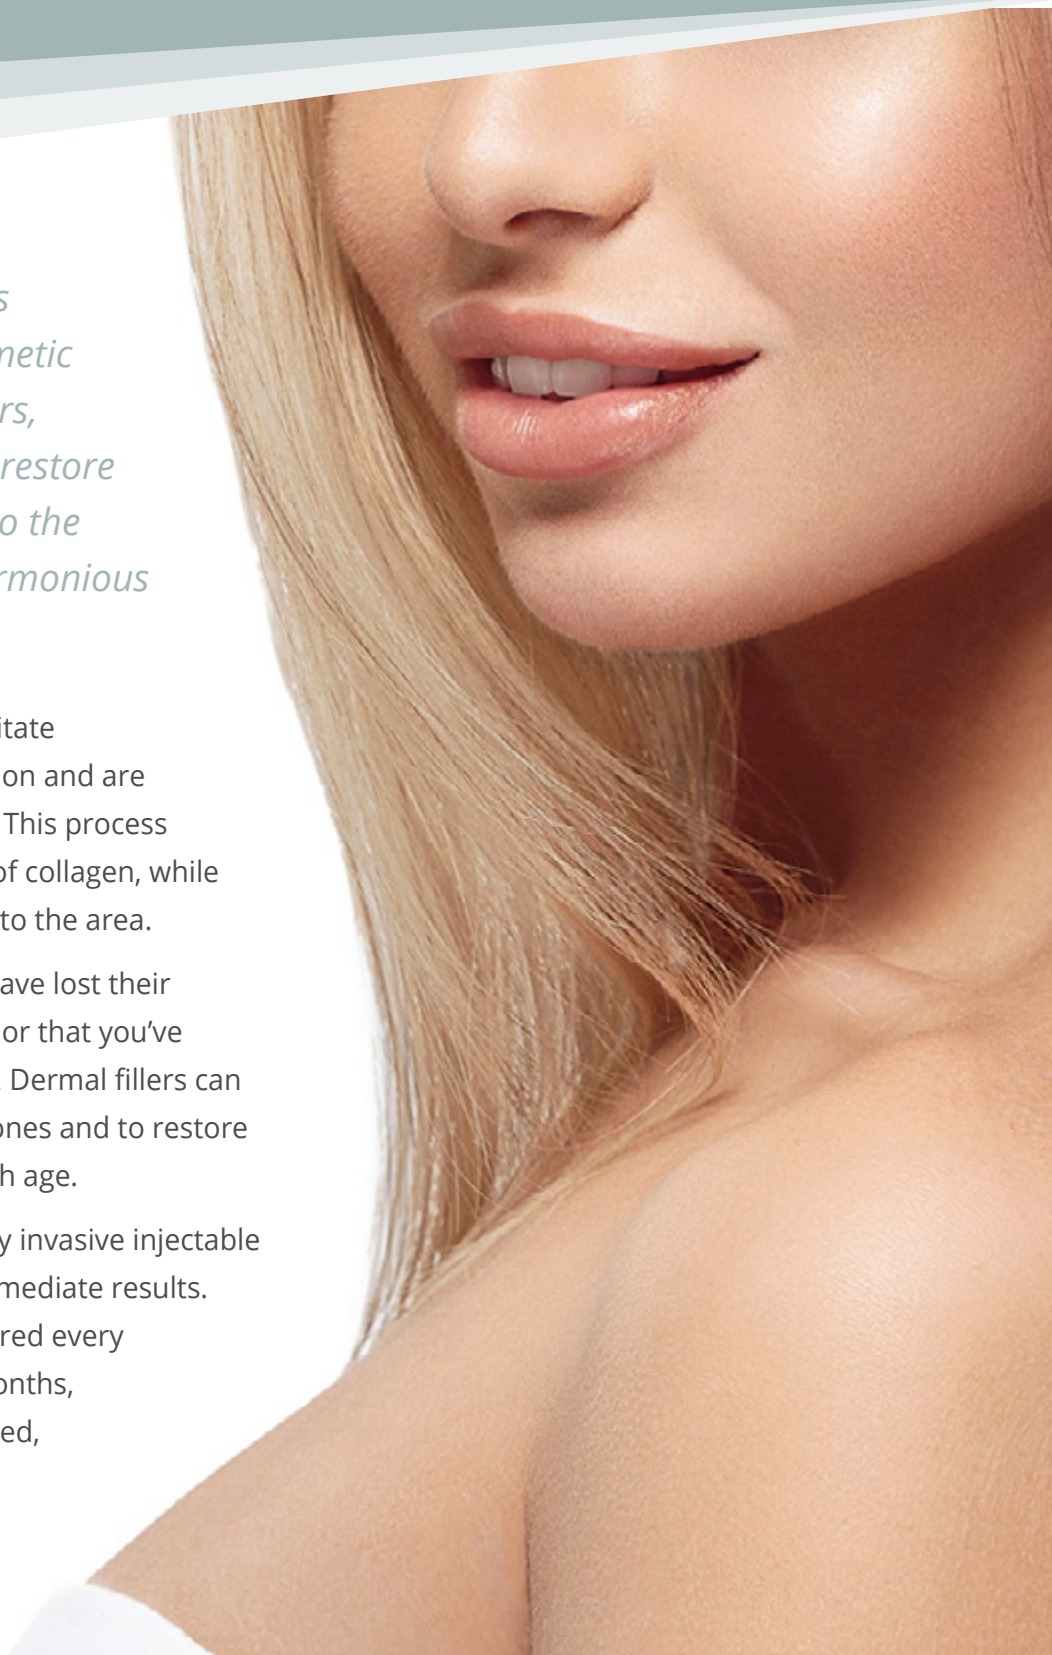

Minimally invasive

Increase fullness

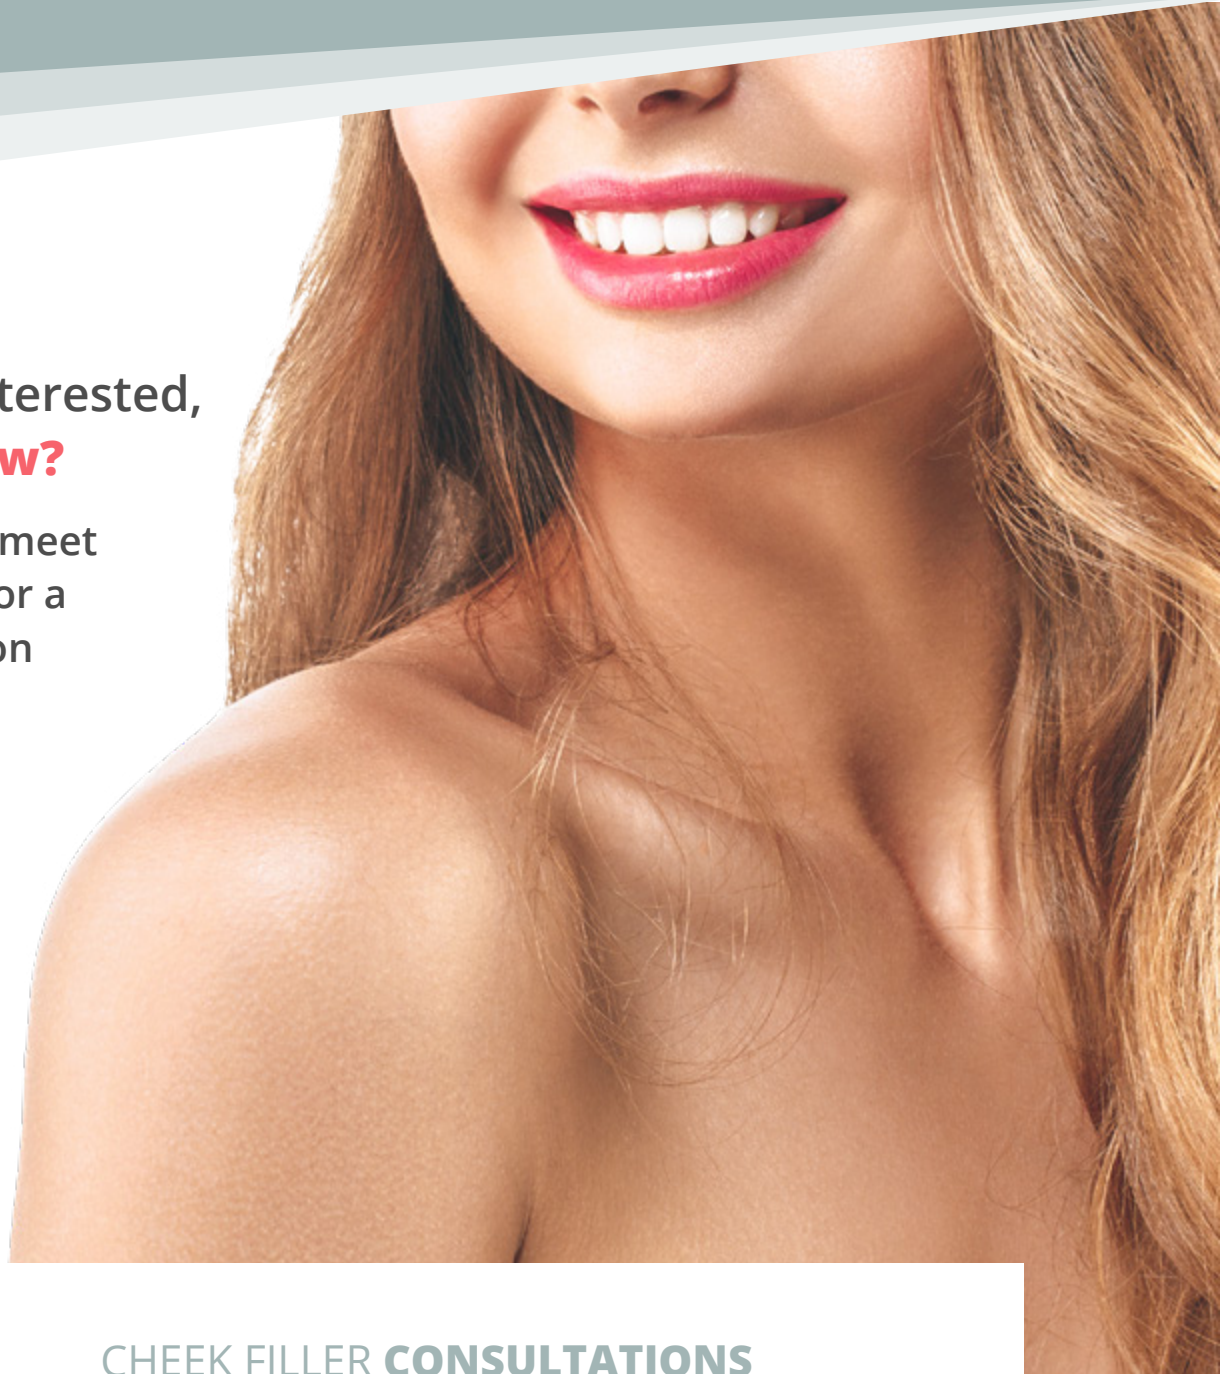

Restore volume

What are my **next steps?**

If I am interested,
what now?

Come and meet
the team for a
consultation

CHEEK FILLER **CONSULTATIONS**

During the consult with our experienced physicians you will feel as relaxed as a routine visit to your GP. During this consultation in our Perth office, our team can go over your cosmetic concerns, and develop a customised treatment plan to suit your personalised needs.
